## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 4/25/2006 have been fully considered but they are not persuasive. Examiner agrees that Cho et al. does not disclose the lightly doped drain regions. However, Shih discloses the lightly doped drain regions 309 in Figs 3A-3G. Cho et al disclose the buffer layer 102(a) between the gate electrode 101b and gate insulating film 103. If the Shih reference had disclosed the required buffer layer configuration, examiner would not have used Cho et al. reference in a 35 USC 103 rejection.

### ***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-18 rejected under 35 U.S.C. 103(a) as being unpatentable over Shih (2003/0230748) in view of Cho et al. (KR 2002089981) in view of Peng et al. (2004/0219723).

Regarding Claims 1-18, Shi discloses manufacture of TFT planer display panel and process for manufacturing the same where in 3A-3G, it is disclosed a substrate 300, polysilicon layer 304, lightly doped drain regions 309, gate insulating layer 307, gate buffer layer, dielectric layer 310 arranged over gate insulating film 307, source and drain regions 306. Shi fails to disclose the gate buffer layer between gate and the gate insulating layer and the required source/drain metal layers. However, Cho et al. disclose

Art Unit: 2826

a method for fabricating LCD panel where in buffer layer 102(a) is located between gate electrode 101b and gate insulating film 103. Furthermore, Peng et al. disclose a low temperature polysilicon thin film transistor and method of manufacturing the same where in Figs. 1I and 1J source and drain metal configuration are disclosed as 146

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required gate buffer configuration and the required source and drain metal configuration in Shih as taught by Cho et al. and Peng et al. respectively in order to have low temperature polysilicon thin film transistor with increased performance.

### *Conclusion*

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
